

## A great business opportunity in music electronics (!)

Welcome to the Vento Project. It is about NEW products (and related Internet portal) in music electronics. Vento is solid; 26-year background; endless quest for innovative music-making concepts.

- The Musical Computer - TMC - is essentially a tablet computer - but it is based on a large TV-size 32' multi-touch display
- The Foot Pedal Board - is the unique pedal board controller for the TMC - for your feet to play
- The TMC is a musical instrument AND a complete music making machine, all in one
- The TMC is THE ONLY product the modern musician will need to buy... to create/play/produce entire songs at home or in the studio
- The TMC replaces ALL traditional instruments. You don't need to learn/play piano, guitar, drums, or anything else; you learn/play the TMC instead
- The TMC is a virtual device; your fingers play onscreen; you play
  - all sorts of musical instruments, all sorts of sounds
  - all kinds of music making machines - all types of hardware or software systems
  - LIVE music creation/notation/generation - musical sequencer REDEFINED!
- The TMC is a multitrack mixer, recorder, player, studio gear - music production complete

Since the NEW touch instruments are easy to play, ANY music lover, not just the pro-musician, is able to perform songs well. You can play ALL instrumental parts, as well as the singing melody. Yes, vocals too. You can do it all yourself... The TMC is a unique and fantastic SONGS MAKING instrument (!)

Everything is TOUCH, everything is NEW and EXCITING. You work with special musical objects directly and interactively onscreen. Breakthrough technology; new concepts; innovation after innovation...

- I am a freelance product developer who currently lives in Germany. I can work in this country or anywhere else in the world; let us turn this project into reality
- I cannot afford to continue developing this project all by myself; it is time to work together; prototype, U.S. patent, demo videos, inventive material (technical descriptions and drawings) are readily available
- The "first round" investment should cover "first round" software development efforts; produce a basic PROTOTYPE; this might cost us \$20, 25, 30, thousand dollars to achieve
- After that... when we all see the TMC in action, the "jaw-dropping effect" will surely take place: "Wow, what an awesome product this is; a real winner!"
- At that point, the Vento enterprise will really get started... with total confidence

Just take a look into the Vento Project website; it is all there; please go-visit
